

Wondering about your Hormones?

Why can't I lose weight?

Is stress making me sick?

Why am I having digestive problems?

Sound familiar?

There can be so many “reasons” why you feel the way you do and “modern medicine” is not helping! Looking outside of the box can bring problems to light!

A functional approach to blood work may gleam problems and a hair analysis for toxins may be beneficial... but there is MORE.

An **Adrenal Stress Index** may shed light on your stress response; explain excessive feelings of tiredness and an inability to cope, as well as inability to lose weight. May shed light on your immune system and your ability to digest wheat grains safely. Helpful with Fibromyalgia, Chronic Fatigue and Auto-Immune patients.

We offer several **Female Hormone Panels** depending on your point in life. May shed light on infertility, migraines, early osteoporosis, decreased sexual desire and hormone imbalance problems.

A **Male Hormone Panel** may help restore well-being, vitality and passion for life. This painless test may tell the origin of the most common male hormone problems...erectile dysfunction and decreased libido.

The **Gastrointestinal Health Panels** are worth considering for IBS, food intolerances, chronic constipation, Chronic Fatigue, Fibromyalgia, overall allergies, chronic skin problems, bloating and other digestive issues.

All these and more are available in our office and Dr. Horn reviews the test results then prescribes a treatment plan tailored to YOUR needs!

These tests are simple and painless. All these tests are performed through **Diagnos-Techs, Inc.**, a federal and state regulated laboratory founded in 1987.

Other tests may be recommended through other labs as deemed necessary after your consultation. Our goal is to find out WHY you feel the way you do so we can help your body start building itself back towards good balance and health!
