

Detoxifying the Body with New Technology

Your Body Is Being Bombarded Daily With Toxins. Most toxins, or poisons, reach our bloodstream when we swallow and inhale, when they are absorbed through our skin, and when they are released by dying cells and invading bacteria. Many of these toxins are broken down and removed from the blood by the liver, by elimination through the kidneys, by exhaling, and elimination through the skin.

You can help your body. By drinking plenty of water daily; eating lots of fresh fruits, veggies, and whole grains; and avoiding tobacco smoke and other fumes; and cutting back on fried foods, animal fats, sugar, and caffeine, you can help keep your body in better working order. Try to eat organic foods.

But even when we're being good to our bodies, hidden dangers can damage our cells and interfere with toxin breakdown. Toxins lurk in prescription medications, food additives, and air pollutants causing us pain, skin problem, and other illnesses that can ultimately lead to more serious conditions. Can you avoid the build up of toxins in your body completely through clean living? Most of us cannot and benefit from detoxification.

We Use The New EB 305 - Energy Balancer & Ionic Detoxification Unit. The EB 305 is an ionized footbath that helps restore the body's energy and balance and aids in the natural detoxification of the body.

How Does It Work? The EB uses a current similar to that of the body. With your feet submerged in the water, this current creates an ionic field (flow of ions). The ionic charge will cause your body to naturally absorb this energy force through the meridian points within the feet and expel the toxins into the water that have been stored in the body such as pesticides, drugs, and heavy metals. This detoxification occurs through the skin, which is the second largest detoxifying system in the body after the lungs.

ADVANCED HEALTH

Roy A. Horn DC PA

Indications For Use: Great for reducing toxic buildup, digestive issues, aches and pain, arthritis, edema and multiple chemical sensitivities. The EB supports a proactive health regime for chronic illness and speeds recovery from acute illness.

Recommended Treatment Protocol: The EB unit is effective when used alone; however, detoxification is greatly increased when used in combination with nutritional support for the liver.

- Phase one is the energy balancing of the six acupuncture meridians in the feet and takes 18 minutes.
- Phase two is the detoxification process and takes approximately twenty-three minutes.

The average patient needs approximately 8-10 treatments initially and then one treatment per month to maintain progress. Patients having received chemotherapy for Cancer will require more treatments to remove the drug residuals.

How Often Can I Be Treated? Between the ages of 10 and 65, detox no more than once every other day. Over 65 the recommendation is no more than every third day. Daily treatments may create a healing crisis as the bodies detoxifying systems come into balance. This may cause excessive fatigue.

Can I Touch The EB Array During Treatments? Absolutely, this will not alter the treatment in any way.

What Are The Bubbles Coming From The Array? The bubbles are the separation of the hydrogen and oxygen of the water molecules as the ionic field is being created.

How Much Does It Cost? \$45 per EB- Pro experience. You have the option of pre-paying for 10 treatments and receiving them for \$40.00 per treatment (bookkeeping reduction). Please note that insurance does not pay for this. If we are just doing the detox part, cost is \$35.00 per treatment or you can prepay \$300.00 for 10!

Patient Experiences? Very favorable. Most patients that have tried the EB-Pro have reported positive effects, even after one experience. We have not had any patient complain of a negative experience.

Depending upon your condition Dr. Horn may suggest additional detox methods.
